

CHECKLIST OF ALASKA BIRDS

24th edition—2018

As of 1 January 2018 the list of avian taxa known in Alaska included 521 naturally-occurring species in 67 families and 21 orders. Phylogenetic sequence, limits of orders, families, and genera and English and scientific names of species follow *The Check-list of North American Birds* (7th ed., American Ornithologists' Union 1998) and supplements (through 2017). Founded on archived specimens, the Alaska checklist increasingly includes new species known in Alaska only from (archived) photos, videotapes, and/or audio recordings. An appended unsubstantiated list comprises an additional 21 species including two species pairs attributed to Alaska without specimen or photo substantiation.

KEY TO SYMBOLS:

- ✓ RARE (Annual or possibly annual in small numbers; most such species occur at the perimeter of Alaska, in season; a few are scarce residents)
- ★ CASUAL (Not annual; these species are beyond the periphery of annual range, but recur in Alaska at irregular intervals, usually in seasonal and regional patterns)
- ⊛ ACCIDENTAL (One or two Alaska records, or none in last 30 years)
