

CHECKLIST OF ALASKA BIRDS

26th edition—2020

As of January 2020 the list of avian taxa known in Alaska included 528 naturally-occurring species in 67 families and 21 orders. Phylogenetic sequence, limits of orders, families, and genera, and English and scientific names of species follow *The A.O.U. Check-list of North American Birds* (7th ed., American Ornithologists' Union 1998) and supplements (through 2019). Founded on archived specimens, the Alaska checklist includes species known in Alaska from specimens, (archived) photo evidence, and/or accompanying audio recordings. An appended "unsubstantiated" list comprises an additional 17 species including one species-pair attributed to Alaska without specimen or photo substantiation.

KEY TO SYMBOLS:

- ✓ RARE (Annual or possibly annual in small numbers; most such species occur at the perimeter of Alaska, in season; a few are scarce residents)
- ★ CASUAL (Not annual; these species are beyond the periphery of annual range, but recur in Alaska at irregular intervals, usually in seasonal and regional patterns)
- ⊛ ACCIDENTAL (One or two Alaska records, or none in last 30 years)
